On June 9 a CTC system was placed in operation over some 28 miles of CN trackage in the Ottawa area, installation having been carried out by CN Signal Department staff on behalf of the FDC, as a part of extensive railway relocation work being carried out by the Commission in the Ottawa area under the National Capital Plan. There are 11 power switches and 40 signals in the CTC zone, with the control panel in the dispatcher's office in Ottawa Union Station. Three passing tracks, with capacity of 115, 108 and 55 cars respectively are incorporated in the CTC interlocking system.
