Kingston (CN)

Long Sault

CN freight train derailed, 22 cars blocking main line

A train derailment early today near Long Sault spilled 22 cars of an 84-car Canadian National freight train across both east and west CN mainlines between Toronto and Montreal.

The wreckage is expected to make the tracks impassable for at least 24 hours.

The accident took place about 1.30 a.m., 350 feet east of the abandoned Long Sault station and one-half mile north of the village itself. Long Sault is eight miles west of Cornwall. No one was injured.

Three tanker cars containing propane gas were among those derailed and at first it was believed their cargo was leaking. OPP Long Sault cordoned off the area but Earl Woito, a CN track supervisor, reported late this morning that there was "no leakage at all."

Cause of the accident is not known. Sources at the scene pointed out that the Long Sault station is not in operation so the accident could not have occurred while the train was being backed onto a spur line.

At the same time, the sources did not believe the train jumped the track of its own accord because the track is a straight-away.

A similar accident occurred at the same location last year, Mr. Woito said it was caused by a broken axle on one of the cars.

Two cranes were being used at the scene of today's derailment to lift the wrecked cars from the tracks. While that is being done, Montreal-Toronto traffic is being re-routed from Brockville to Dorval via Smiths Falls.

The Rapido between the two cities will be going the entire route on Canadian Pacific tracks.

A CN dispatcher in Belleville estimated that trains could be delayed as much as two hours by the re-routing.

Total damage to the derailed train could not be estimated this morning but Mr. Woito said a lot of empty cars were involved in the accident.

The train was en route from Toronto to Montreal.

Kingston (CN)

Morrisburg

Triple blast turns railcars into missiles

Morrisburg. A vivid plume of flame rising from the mass of twisted railway cars and smouldering debris has so far thwarted attempts to clear the CNR's main line here.

A derailment of 36 cars occurred about 8.15 a.m. Friday, tearing up hundreds of feet of track and sending boxcars careening down embankments and into the bush.

Three major explosions in tanker cars carrying thousands of gallons of propane gas shook homes as far away as seven miles.

One resident likened the first explosion to an earth tremor.

One of the propane-laden cars weighing between 50 and 60 tons, flew about a quarter of a mile through the air after it exploded.

CNR officials speculated that burning gas escaping from the ruptured tank acted like a rocket.

Swathe in trees

The car lifted off the track and cut a neat swathe through the trees - some of which were about 12 inches in diameter at their base.

The trimmed trees indicate that it entered the bush at a height of about 12 feet before rising to about 30 feet above the ground.

The tanker crashed into a service line which joins the main tracks near the scene of the derailment, about a quarter of a mile away.

It then plunged through a wooded area for another 150 feet before coming to rest. Charred telephone poles located along its line of travel indicated the intense heat.

Pieces of splintered limbs from the trees it had struck littered the lines. Some had penetrated more than a foot into frozen ground beside the railway lines.

Tankers explode

A total of three tankers exploded within seconds of the derailment which occurred on a straight stretch of line about two miles east of here.

It was from one of these tankers - lying helter skelter among the other wrecked railway cars that a brilliant orange plume spurted all day Friday.

Fears that the remaining gas in the car might explode, coupled with the knowledge that a fourth propane-laden tanker was also damaged in the derailment, kept recovery crews at a distance.

One CNR spokesperson said crews would wait until the flame went out before attempting to clear the line. The derailment blocked both east and west lines.

Trains have been rerouted through Ottawa.

The spokesman said he expected the lines here to be blocked until Monday. Heavy cranes from both Montreal and Toronto were to arrive at the scene Friday afternoon to clear the twisted cars from both sides.

Area sealed off

Within minutes of the derailment police attempted to seal off the area.

Both police and the Morrisburg fire department learned of the explosions by their close proximity to the scene. The provincial police detachment was shaken by the blasts.

Firemen succeeded in reaching the remote scene, but could do little to contain the fire. The fierce heat drove them back as the propane shot flames 100 feet into the cold air.

An inspection of the scene about six hours later, when newsmen were allowed near the potentially dangerous area, revealed scorched fence posts and melted snow as far as 150 feet from the main line.

A total of about 20 cars caught fire and by early evening were still smouldering beside the hissing propane.

A decision had not been made concerning the remaining propane tanker car which had not ignited.

The eastbound freight train had been hauling 77 cars - 59 of which were loaded with general cargo.

While one ruptured tanker spewed grain onto the scorched tracks, another loaded with fruit and vegetables littered the area with hundreds of burned oranges.

Twisted metal, splintered framed and some of the car's wheels were scattered for about 100 feet along the lines.

Curious area residents travelled by snowmobile and on foot to view the scene. Police - fearful that another explosion might occur - cleared the area.

Neither the crew in the locomotive nor in the caboose was injured in the incident. The first car to derail was loaded with steel and was located ten cars behind the engine.

Chlorine gas

The rear portion of the train - including a tanker loaded with toxic chlorine gas - was eventually hauled from the rest of the wreckage by a locomotive sent in from nearby Brockville, one of CN's headquarters.

A police spokesman said an evacuation plan had been drawn up for the people of Morrisburg had the chlorine-laden tanker ruptured.

The only people close to the explosions and derailment were members of a bush party clearing surrounding bush area of dead elm trees.

They reportedly ducked flying chunks of steel as the first propane tanker exploded.

CN officials are continuing their investigation into the derailment as work crews clear the line.

Officials say damage is impossible to estimate, but will run into hundreds of thousands of dollars.

TANKERS EXPLODE NEAR MORRISBURG , Flames shoot into the air from three propane tankers which exploded Friday morning following a Canadian National train derailment near Morrisburg. A total of 22 freight cars were destroyed in the fire which followed the derailment. CN officials estimate wreckage will not be cleared until Sunday night. The freight was eastbound for Montreal when the accident occurred. Fragments from the tankers were sent flying after the explosion, but workers near the train at the time of the accident escaped injury.

(Caption to aerial photo)

The village of Morrisburg, 12 miles southwest of Cornwall was shaken by a fiery explosion Friday morning when a Canadian Canadian National freight train was derailed two miles east of the town and three tank cars carrying propane blew up.

No one was injured but it was quite literally an earth-shaking earth-shaking experience for the village of only about 2,000.

Witnesses said that windows shook, doors of homes were blown open and icicles were, shaken loose from roof-tops. "We were standing here in the office when it happened," explained a mechanic at the Texaco station in Morrisburg. "Everything in the garage was rattling. We thought it was either a jet breaking the sound barrier or somebody dynamiting. The whole village shook."

Mrs. James McCrank, who lives just one mile from the site of the derailment, said the explosions shook her house. "I thought the roof was falling in."

The explosions were heard by a resident of Massena New York, 30 miles away.

About 2,200 feet of track was ripped up.

The 77-car freight train was eastbound for Montreal when the derailment occurred at 8.15 a.m. CN spokesman Walter Smith said that shortly after 36 cars left the track, one of four , propane tankers exploded. Seconds later, two more tankers blew up almost imultaneously, sending flames 100 feet into the air.

One tank car was blown a quarter of a mile into the bush, shearing off the tops of trees as it flew through the air.

Firemen from Morrisburg, Upper Canada Village and Winchester were unable to fight the blaze because of its intense heat. They had to stand back while flames destroyed 22 cars.

A provincial police spokesman said 12 men working a few hundred yards from the wreck had to crawl out of the area on their hands and knees because metal was flying in all directions.

"They were lucky,, he said. "They were so shook up after we took them to a service station that they could hardly talk."

The men were cutting down dead elms as part of a federal winter works project.

The wreckage blocked the CN's main line between Toronto and Montreal. Trains are being re-routed on CPR tracks, through Smiths Falls.

Mr. Smith estimated that it will be Sunday night at the earliest before the main line is cleared.

Track opens for westbound rail traffic

MONTREAL (CP) Rail traffic was resumed Sunday on the westbound track of Canadian National Railway's main Toronto-Montreal line following a freight train derailment at Mor- Morrisburg, Ont., Friday. It was not immediately known when the other track would be open. The section was closed Friday following the denaillmerft of 36 cars of the 98-car westbound train. A few minutes after the derailment several propane cars exploded, rocking the countryside countryside for miles around.

Train Derailment

Lachute, Que., ten cars of a CP Rail freight train were wrecked in a derailment Wednesday on the Montreal - Ottawa line about ten miles west of here. No injuries were reported. The derailment damaged about 1,000 feet of track, a Lachute fireman said.

TRAIN DERAILMENT

LACHUTE .Que. (CP) Ten cars of a CP Rail freight train were wrecked in a derailment Wednesday on the Montreal-Ottawa line about 10 imjles west of here. No injuries were reported. The derailment damaged about 1,000 feet of track, a Lachute fireman said.

Regular freight and passenger service was restored Friday over a section of CNR track damaged a week ago by the derailment of 36 cars of a freight train. Both east- and west-bound trains have been using the west-bound lane of the double track since Monday. Clearing and repairing the east-bound track had been delayed by a burning propane tank car which exploded after the derailment.

The derailment occurred near this village 20 miles southwest of Cornwall. Some debris remains at the scene, but eh final clean-up is expected to be finished Monday.

The driver of an oil truck was killed today when his vehicle smashed into the side of a moving train and burst into flames on highway 17 just east of Carp.

Three of five cars in the CNR freight train were derailed.

The driver was enveloped in flames and perished in the truck which burned for more than an hour.

The accident occurred at 10.15 a.m. Police and fireman found the remains of the driver's body after searching for an hour and a half.

Nothing remained of the truck except a small potion of yellow cab. Police said the vehicle belonged to the Shell Oil Company.

A charred licence oplate was found in the wreckage. Police believe it is from the truck.

A witness told police it appeared the truck driver was going to attempt to cross the tracks before the train reached the crossing but changed his mind, slammed on the brakes, and skidded 200 feet in the side of the train.

The impact sent three cars sprawling into the snow in flames. The caboose remained on the tracks.

Police said an unidentified railwayman who was inside the caboose when it was hit walked away uninjured. No one on the train was hurt.

Power lines were knocked down and a set of signal lights were torn out of the ground.

Acrid grety smoke blanketed the accident scene as firemen tried to put out the flames in the train.

The truck was swept about 20 feet off the road and into a small creek. Parts of the creek were afire from oil dumped into the water.

Balance illegible.

Train burns in background while fire-gutted wreckage of oil tanker lies beside tracks at right.

CPR BLAMES CITY FOR DERAILMENT

Ottawa has been blamed for this train derailment at the Hunt Club Road crossing about noon Sunday. A CPR spokesman said a city grader didn't lift its blade while crossing the tracks and piled gravel and Ice between the rails. Two engines and one car of an Ottawa-to-Smlths Falls freight train went off the tracks. CPR workmen restored service on the ljne in about three hours. The CPR spokesman said the matter would be taken up with the city today.

Jury urges lights at crossings.

A coroner's jury has recommended that signal lights be located at all level crossings on main highways to warn motorists in advance of approaching trains.

The jury was sitting Wednesday at an inquest into the death of Joseph Brideau, whose fully loaded gasoline tanker collided with a CNR freight train on Feb. 28. Evidence had shown that the visibility is poor at the crossing on Highway 17 near Carp, and there are several distractions for drivers proceeding west on the highway.

These, along with the position of the crossing at the bottom of a hill, were listed as contributing factors to the accident which derailed three of the railway cars and closed the highway for more than 24 hours.

The engineer of the train, Irwin Currie, said the Shell Oil truck, loaded with 8,000 gallons of gasoline, hit the train after veering off the road and knocking over a signal post.

"All hell broke loose" he said. The truck exploded immediately, setting fire to the last three cars.

The jury also recommended that a remote warning light be placed 500 feet north of the Carp railway crossing.

30/08/1972 *Ottawa Citizen**Lachute**Calumet*

Lachute. A young garden product salesman still maintains he saw no warning lights before his truck crashed into the side of a Montreal-bound passenger train at Calumet on Aug. 11

Testifying at a Canadian Transport Commission inquiry here Tuesday, Michael Emery, 23, of Gatineau repeated the story he told immediately after the accident which claimed three lives and injured 26.

Mr. Emery didn't go as far as to say the flashing signals weren't working. He claimed he "didn't see them working." He stated positively the bells which normally ring as the lights flash weren't working before the collision occurred.

However, several witnesses called during the inquiry - which ended late yesterday afternoon - contradicted Mr. Emery's evidence.

Ken Hotchkiss, a Canadian International Paper Company purchasing agent, who travels Highway 8 over the level crossing every morning about the same time, said both lights and bells were working normally when he crossed as the CP Rail dayliner approached.

He said he glanced in his rear view mirror as he crossed and saw no sign of the Emery truck. Commission Counsel J.M. Fortier deduced the accident happened seconds after Mr. Hotchkiss left the scene.

Serge Roy, 16, a student living near the level crossing, said he was in his yard shortly after 9 a.m. and heard the bells on the signal posts ringing.

He added, because of his position, he couldn't see if the lights were flashing. He said he saw the Emery truck coming along highway 8, lost it from view behind some bushes, then saw it collide with the dayliner.

A passenger on the train, Laura Ratchky of Windsor, said she was looking out of the window near the Calumet crossing and saw the warning lights flashing.

Gilbert Blakeney, a CTC signalling engineer, said signals were functioning normally when tested shortly after the accident.

The inquiry, chaired by Louis Talbot, was also greatly concerned at the speed the dayliner was travelling as it came through the crossing.

E.J. Hase, director of operations for the CTC, said a statutory speed limit of 24 m.p.h. at all level crossings where an accident has occurred. He said the limit can only be lifted by the commission.

Although accidents had occurred at the Calumet crossing in the past, there was no speed limit at the time of the crash because previous statutory limits had been lifted. He added the 25 m.p.h. limit had been re-imposed since the Aug. 11 accident.

Veteran CPR engineer George Frankland of Ottawa said he put the throttle of his engine in the maximum position as he pulled out of Calumet station where he'd stopped to pick up two passengers.

Mr. Frankland emphasized when the throttle was placed in maximum the train didn't immediately reach top speed.

"The engine accelerates on its own and takes about a mile to reach its top speed of 90 m.p.h." he said. "We were doing about 45 m.p.h. When we went through the crossing, which is about half a mile from the station."

An unexpected discovery

A commotion stirred the Lachute Masonic Hall, where the inquiry was held, when, under cross-examination by the lawyer representing Mr. Emery, Mr Frankland revealed the train's speedometer wasn't working the day in question.

He said he wasn't aware of the problem until after he left the Ottawa Station, and insisted he was experienced enough to judge how fast he was going without the instrument.

(Mr. Hase testified that during tests made by the commission after the accident an engine identical to the one Mr. Frankland was operating was accelerated out of Calumet under the same circumstances and reached a speed of 44 m.p.h. at the crossing).

Mr. Frankland said the dayliner's speed is only restricted on curves - 60 m.p.h. - apart from crossings carrying statutory limits.

He said the train's headlamp was on as it approached the crossing and he gave the warning whistle and activated the bell as usual. He said it was a "fine, clear day."

The dayliner was on the crossing when Mr. Frankland first noticed the Emery truck.

He said his first impulse was to pull the emergency brake. Then he decided the best thing to do was get through the crossing and hopefully avoid the truck.

Mr. Emery said he didn't know the train was approaching until he saw it emerge from behind a line of trees when he was about 125 feet away. He said his radio was off and he couldn't remember whether his windows were raised or not.

He said he applied the brakes and swerved but was too close to avoid impact. He said he approached the crossing at a normal rate of speed.

Killed in the accident on the Ottawa-Montreal line were Bernice Doherty, 49, of Great Falls, Mont., Jeanne Marie Brunelle, of Ste. Therese, Que., both passengers in a CP Rail diesel car and Reginald St-Gelais, 24, of Gatineau, a passenger in the truck. None of the injured was seriously hurt.

27/09/1972 *Eganville Leader**Eganville**Eganville*

September 27 C.P.R. Line Being Lifted Between Douglas And Eganville

In one month's time the C.P.R. line between Eganville and Douglas will no longer exist and all that will be left will be a graded railway bed and memories in older minds of when the line was a busy one.

A Burlington firm, Penvidic Contracting Co., which builds and tears up railways, has been engaged in the ripping up of the Eganville-Douglas line for the past month.

The line is being lifted from the yard in Eganville for 9.7 miles to the switch in Douglas in the area of where the old station was located.

The line between Eganville and Douglas was closed about three years ago because it wasn't paying for itself. The company recorded thousands of dollars in losses.

(Monday 6/11/1972) Its that time again - Santa's in town.

He's rather on the lean side .. Not as roly poly as last year

At least that's the way adults saw it.

But the children didn't seem to care. For them it was his big red suit, his big white beard and his big belly laugh.

They were full of little whispers: "Ist santa".

Everything is big for a little child, especially Santa.

About 2,000 of them rode the special Saturday train from Vars to Ottawa. With Santa. Great big Santa.

They weren't the least bit concerned that modern-day Santas don't seem to have reindeer any more. There wasn't so much as a hoofprint as St. Nick drove by automobile from the train station to meet the 15-float Santa Claus Parade - his escort to freiman's Toyland.
